Dear Synopsys,

Congratulations on 20 years of successful business!

The longstanding relationship between Ericsson Mobile Platforms and Synopsys has been very satisfying to our company. It has enabled us to further strengthen our ASIC developments that are part of our platform offering today.

The tools Synopsys develop are used in the development of Ericsson Mobile Platforms' digital baseband ASIC, which is a crucial part of our platform offering.

With Synopsys being a provider of EDA tools to not just Ericsson Mobile Platforms, but also to our ASIC partners, it ensures that we have the best possibility to run our ASIC projects on-time.

Ericsson Mobile Platforms works with the leading state of the art semiconductor technologies to provide highly integrated, high performance and cost effective system on chip digital baseband ASIC for our mobile telephone platform products. Using the tools provided by Synopsys in the development helps Ericsson Mobile Platforms to bring out system on chip digital baseband ASICs to our customers on a highly competitive market. Overall the use of Synopsys EDA tools and Professional Services assures that Ericsson Mobile Platforms have a highly efficient and up to date development flow for our digital ASIC development.

Ericsson Mobile Platforms offers complete end-to-end interoperability tested platforms for 2.5 and 3G. A common software platform for GPRS, EDGE and WCDMA/GPRS terminals enables application portability, stability and security, and ensures best-in-class outcomes regarding power consumption and size.

Today, several of the top handset manufacturers in the world are Ericsson Mobile Platforms' customers.

We at Ericsson Mobile Platforms appreciate our cooperation with Synopsys and look forward to many years to come of successful cooperation.

Happy 20th Anniversary Synopsys!
