

Installation Release Notes

These release notes present the latest installation information for the June 2005 release of the Synopsys tools in the following sections:

- Synopsys Installer
- Known Problems and Limitations

This version of Synopsys software requires the complete installation procedure. Install each version in a new directory. Do not install different versions of Synopsys software in the same directory. Also, do not install these versions of the software over an earlier release.

For complete installation information, see the *Installation Guide* at http://www.synopsys.com/Install_Guide.html.

For quick-start installation instructions (EST users only), see the *product_INSTALL_README.txt* file in the product download directory.

For product-specific issues not covered by these release notes, see the release notes for individual products.

Synopsys Installer

This section describes installer changes for the latest versions of the Synopsys tools.

Tools That Use the Installer

Products releasing in June 2005 that use the Synopsys Installer must use version 1.1. of the Synopsys Installer.

EST users can download the `synopsysinstaller_v1.1.tar.Z` file from the `synopsysinstaller_v1.1` directory in the `rev` directory. For instructions on downloading this file, see “Downloading the Software” in the *Installation Guide*. Note that the installer needs to be downloaded only once for all products that use it.

CD users can use the Synopsys Installer executable files that are available on the shipped CD.

The following is an updated list of tools now using the Synopsys Installer:

Astro	JupiterXT	Synthesis tools
Astro Interactive Ultra	NanoSim	System Studio
Astro-Rail	PathMill	TCAD
Cadabra	PowerMill	TetraMAX
ESP	PrimePower	TimeMill
Formality	PrimeTime	Vera
Hercules	SOLD	
HSPICE	Star-MTB	
IC Workbench	Star-RCXT	

Products not in this list continue to use their current installation methods, as documented in the *Installation Guide* or product-specific *product_INSTALL_README.txt* file.

For installation instructions for the Milkyway Environment tool, see the *mw_INSTALL_README.txt* file.

Installer v1.1 Updates

The following updates have been made to Synopsys Installer v1.1:

- The *install.now* script has been replaced by the *installer* script. To have access to the *installer* script, you must download the Synopsys Installer software (*synopsysinstaller_v1.1*) from the *rev* directory. (The *installer* is packaged with each CD product, so if you are installing from CD, you automatically have access to the *installer* script.)
- Beginning with Synopsys Installer version 1.1, it is no longer necessary to download the FTP files for each product to a separate temporary directory. You can now download multiple product files into the same temporary directory.

Known Problems and Limitations

The *Installation Guide* version X-2005.06 describes changes and requirements for Synopsys Common Licensing 10.8. However, this version of SCL will not be available until a later date. For availability, contact your local Support center.
