Chapter 1  Getting Started

This chapter lists system requirements for the LucidShape family of products and tells you how to contact LucidShape Support.

You can run LucidShape products using either a fixed license or a floating license. A fixed license allows you to run LucidShape only on the computer on which it is installed (see Installing LucidShape with a Fixed License on page 3). A floating license, which is installed on a network server, allows you to run LucidShape on any computer on the same network (see Installing LucidShape with a Floating License on page 11). The number of users that can use LucidShape concurrently is limited by the licensing software.

Although the examples in this document show and refer to the LucidShape product, the instructions apply to the entire LucidShape family of products, which includes:

• LucidShape
• LucidShape Lite
• LucidDrive - Additional setup may be needed if you are installing LucidDrive Server/Client or LucidDrive Manual versions.
• LucidShape CAA V5 Based product and the separately licensed Design Module, Visualize Module, and Light Guide Design Module

System Requirements

To install LucidShape to run with either a fixed or floating license, you must have:

• A personal computer with any CPU with at least four cores from the last or second-last processor generation.

To get maximum performance from multi-threaded simulations, we recommend 4 or more CPU cores. LucidShape simulations make use of multi-threading, and a high number of cores or threads will enhance ray tracing speed; however, the most beneficial feature to take into consideration is a CPU with a very high single-thread frequency (or single-thread performance).

If Intel Hyper-Threading Technology is available on your computer, enabling it will further increase multi-threaded simulation performance.

• Operating System:
  – LucidShape - Windows 7 64-bit and Windows 10 64-bit
  – LucidShape Lite - Windows 7 64-bit and Windows 10 64-bit
  – LucidDrive - Windows 10 64-bit
  – LucidShape CAA V5 Based for CATIA R27, R28, and R29 - Windows 10 64-bit

• Random Access Memory (RAM): 8 GB minimum, 16 GB or more recommended

• GPU:
  – With GPUTrace: any NVIDIA graphics card (GeForce recommended) with the latest available graphics card driver.
  – Without GPUTrace: LucidShape does not require a special graphics card. If you are purchasing graphics cards, contact LucidShape Support for the latest recommendations. If you are installing LucidShape CAA V5 Based, see the Certified Workstations link on the Dassault Systemes Hardware and Software page.
• Free disk space as listed to install the LucidShape product:

<table>
<thead>
<tr>
<th>Product</th>
<th>Disk Space</th>
</tr>
</thead>
<tbody>
<tr>
<td>LucidShape</td>
<td>1.5 GB</td>
</tr>
<tr>
<td>LucidShape Lite</td>
<td>400 MB</td>
</tr>
<tr>
<td>LucidDrive</td>
<td>1.75 GB</td>
</tr>
<tr>
<td>LucidShape CAA V5 Based</td>
<td>1.5 GB</td>
</tr>
</tbody>
</table>

• Free disk space on the system drive (i.e., the drive on which the operating system is installed) for installing prerequisite software and for processes and temporary files required when running the product: 5 GB. If LucidShape is installed on a drive other than the system drive, that drive should also have at least 5 GB free disk space.

Large models and complex analyses may require significantly more disk space.

• License keys provided by Synopsys OSG via SolvNetPlus SmartKeys or your local LucidShape software distributor.

• License dongle and a USB2.0 (or higher) port (for Type A)

• Display:
  – A high-resolution monitor (1280 x 1024 or better) with 16-bit (65536) colors or more
  – An OpenGL compliant graphics card with stable ICD driver support recommended. We recommend that you always use the latest version of the driver for your graphics card.

• If you are installing the LucidShape CAA V5 Based product, you must have a licensed version of CATIA V5 R27, R28, or R29 and the CATIA Mechanical Design 2 Configuration (MD2). The Design Module, Visualization Module, and Light Guide Design Module for the LucidShape CAA V5 Based product each requires a separate license.

  Note: CATIA licensing requirements for the LucidShape CAA Light Guide Design Module are subject to change in future releases. To check for updates to these requirements, contact LucidShape Support.

• If you will be running LucidShape with a floating license, you must also have:
  – TCP/IP network protocol
  – OSG Floating License Manager (a Sentinel RMS license manager that has been customized for Synopsys OSG software), provided by Synopsys OSG via SolvNetPlus.

• A DVD drive, if installing from a DVD

Contacting LucidShape Support

If you need help or have questions about how to use LucidShape products that are not answered in the documentation or online help, you can contact the LucidShape Support team or your local distributor.

• The LucidShape Support team is available from 9 a.m. to 5 p.m. CET (UTC + 1).
  Telephone +49-5251-29875-00
  Email: lucidshape_support@synopsys.com

• For customers working with distributors, please contact your local LucidShape software distributor for support. See the Synopsys Optical Solutions Group Global Contacts page for contact information.
Chapter 2  Installing LucidShape with a Fixed License

You can run LucidShape products using either a fixed license or a floating license. This chapter describes how to install the product to run using a fixed license, which allows you to run LucidShape only on the computer on which it is installed.

These instructions assume that you have already downloaded LucidShape from the Synopsys SolvNetPlus website or that you ordered and received a LucidShape DVD. If you have not done so, see Using SolvNetPlus to Obtain LucidShape Software and Licenses on page 33.

Note: Except where noted, the instructions and illustrations in this document for the LucidShape product apply to all of the LucidShape products.

Installing LucidShape

1. Log on to your computer as Administrator.

2. Navigate to the folder where the LucidShape setup file is located. If you have a DVD, insert it into the DVD drive and navigate to that drive.

3. Double-click the setup file (e.g., SetupLucidShape_version.exe)

   where version is the version number for the release (e.g., SetupLucidShape_2019.09.exe). For the LucidShape CAA V5 Based product, the file name also includes the CATIA version (e.g., SetupLucidShapeCAA_R27_2020.06.exe).

   The Setup window is displayed at the License Agreement screen.

4. Click I Agree to continue.

   If you are installing LucidDrive or LucidShape CAA, the Choose Install Location screen is displayed. Skip to step 6.
CHAPTER 2 Installing LucidShape with a Fixed License

If you are installing LucidShape or LucidShape Lite, the Choose Components screen is displayed. By default, the LucidShape option is selected.

5. Choose the product(s) you want to install and click Next.
   The Choose Install Location screen is displayed.

6. Specify a location.
   If an earlier release of the product was installed, the default location will be set to the path used for that release. If you want to install the program in a different folder, click the Browse button to locate and specify that folder.
   For most LucidShape products, the default location is C:\productName_version.
   For LucidShape CAA, the default location is C:\Program Files\Synopsys\LucidShapeCAA\CATIversion\LucidShapeCAAversion.

7. Click Next (for LucidShape CAA V5 Based) or click Install (for all other LucidShape products).
   If you are installing a LucidShape product other than LucidShape CAA V5 Based, the Setup window shows the progress of the installation. Skip to step 12 on page 6 to finish the installation process.
CHAPTER 2 Installing LucidShape with a Fixed License

If you are installing the LucidShape CAA V5 Based product, the Choose CATIA Installation Directory screen is displayed; continue with the following steps.

The Choose CATIA Installation Directory screen allows you to associate the LucidShape CAA product with a specific CATIA installation. If a CATIA installation folder was detected, the path to that folder is displayed in the input field. If CATIA is not installed on the same computer, or if CATIA is managed by a third-party tool that maintains configurations and versions, the input field may be blank, and you may need to perform additional steps to complete your installation. See Troubleshooting the LucidShape CAA V5 Based Installation on page 45 for details.

8. If you need to specify or want to change the CATIA installation folder, edit the path or click the Browse button to navigate to it and select it.

9. Click Next to continue.

The Choose Public Data Location screen is displayed. This allows you to specify a location for installing public data, such as example model files. To allow interactive use of these files, choose a folder for which you have write permission. The default location is C:\Users\Public\Documents\LucidShapeCAA\CATIAversion\LucidShapeCAAversion (e.g., C:\Users\Public\Documents\LucidShapeCAA\R27\2020.06).

10. To specify a different folder, edit the path or click the Browse button to navigate to it and select it.
11. Click Install.

The Setup window shows the progress of the installation.
When the process is complete, Installation Complete is displayed in the Setup window.

12. For LucidShape CAA, this is the final screen in the installation wizard. Click Close and skip to step 14. For all other LucidShape products, click Next to exit the LucidShape installation wizard.

The Completing the LucidShape Setup Wizard screen is displayed.

13. Click Finish.

The installation is complete.

Note: LucidShape software will not be able to run if it is blocked by Data Loss Prevention software (e.g., DeviceLock) or anti-malware software (e.g., Trend Micro) installed on your computer. Contact your system administrator to ensure that such software has a policy that allows LucidShape software to be whitelisted.
14. If you already have a license key for this product, skip to Installing a License Key for a Fixed License on page 8. If you do not yet have a license key, continue with Obtaining the Host ID for a License Dongle on page 7.

15. If you are installing LucidShape CAA, you must perform one more step before you can use this product. See Specifying Global Settings for NVIDIA Graphics Card on page 47 for instructions.

16. If you are installing LucidShape CAA with a license for the Light Guide Design Module, you must perform one more step after you install your license key but before you can use this module. See Set CATIA Option to Preserve Object Naming for the Light Guide Design Module on page 48 for instructions.

Obtaining the Host ID for a License Dongle

A license key is designed to work for only one USB dongle, so the license key is associated with a unique value encoded on the dongle called a Host ID. Because of this, you need to know the Host ID for the license dongle before you can retrieve a license key. The Host ID is printed on a label on the USB dongle; if you’re unable to read the ID on the label, you can also obtain the Host ID by running a program that reads it from the dongle. In the LucidShape installation, the GetHostID utility is provided for this purpose. Follow these steps to run GetHostID.

1. Insert the USB dongle in an active USB port. A light glows at the end of the dongle when it’s inserted correctly in an active USB port.

2. Select the Windows Start menu, expand the LucidShape group and select GetHostID, shown in the following figure.

   ![GetHostID Utility](image)

   The GetHostID utility is displayed. In this example, the Host ID for the USB dongle is 400-**MMMMMMMMMMM. Note that the version number displayed at the top of the GetHostID utility may vary, depending on the product you’re installing.
CHAPTER 2 Installing LucidShape with a Fixed License

3. Copy the Dongle Host ID to use when you retrieve your license key on the Synopsys SolvNetPlus website. See Retrieving License Keys on page 40 for instructions.

4. Click Done to close the GetHostID utility.

   After you retrieve your license key, continue with Installing a License Key for a Fixed License on page 8.

Installing a License Key for a Fixed License

To install the license key for a LucidShape product, you must have:

• The LucidShape product installed

• A license dongle

• A valid license key. This procedure assumes that you have already obtained a license key from the SolvNetPlus SmartKeys web page. If you have not done so, see Retrieving License Keys on page 40 for instructions.

Follow these steps to set up licensing for the LucidShape product.

1. Insert the license dongle in an active USB port. A light glows at the end of the dongle when it’s inserted correctly in an active USB port.

2. Start the LucidShape product. To do this, you can double-click the shortcut icon on the desktop or select the Windows Start button and navigate to the product name, as shown in the following examples.

   – Windows 7: All Programs > LucidShape 2019.09 > LucidShape

   – Windows 10: Start > LucidShape 2019.09 > LucidShape
3. Make sure the Fixed option is selected and then click the Install Fixed License button. The Fixed License Installer is displayed.

4. Click the Browse button.

5. In the Open dialog box, navigate to the license key file, select it, and click Open. The Open dialog box is closed, and the path to the license key file is shown in the Fixed License Installer.
6. Click the Install button.

The license key is installed, and the Success dialog box is displayed.

7. Click OK.
8. Click OK on the License Check Failed dialog box.
9. Start the LucidShape product again.
Chapter 3  Installing LucidShape with a Floating License

You can run LucidShape products using either a fixed license or a floating license. This chapter describes how to install the product to run using a floating license on a network server, which allows you to run LucidShape on any computer on the same network, and describes how to install LucidShape on one or more client machines. The number of users that can use LucidShape concurrently is limited to a predetermined number by the licensing software.

The floating license capability is supported by the OSG Floating License Manager, which is a Sentinel RMS license manager that has been customized for Synopsys OSG software. If you install other Synopsys OSG software products, they will share the same license management software, and their license keys will be written to the same license key file. The applications cannot share licenses; they share only the license server software.

Installing a floating license requires system-administration-level training and should be performed by someone who is familiar with your network structure. To perform this installation, you must be logged on as administrator.

Note: Except where noted, the instructions and illustrations in this document for the LucidShape product apply to all of the LucidShape products.

The steps for installing LucidShape to run with a floating license are:

1. Selecting a License Server on page 11
2. Downloading and Installing the OSG Floating License Manager on page 12
3. Installing a License Key for a Floating License on page 20
4. Installing LucidShape on Client Machines on page 21
5. Enabling the Floating License on page 26
6. Optional: Administering Floating Licenses on page 27

Selecting a License Server

Before installing any software, you must identify the computer that will act as the license server. This must be a computer connected to a network that can grant access to one or more client machines.

For any one product, it is not possible to have two sets of license keys (locked to different dongles) on the same floating license server. Each set of license keys is composed of a set of exclusive module licenses; because of this, if you install license keys for a product and then add a second set of license keys for that product, the second set of license keys will override the first set.

Note: The OSG Floating License Manager communicates via port 5093. If you will be running LucidShape across different subnets, you will have to configure your routers or firewalls to allow two-way communication across this port.
CHAPTER 3 Installing LucidShape with a Floating License

Downloading and Installing the OSG Floating License Manager

To run this version of LucidShape, you must have the OSG Floating License Manager, which is provided on the SolvNetPlus website on the same Downloads page as the product software. (See Using SolvNetPlus to Obtain LucidShape Software and Licenses on page 33 for details.) Follow these steps to install the OSG Floating License Manager on the license server.

**Note:** If you have a different version of the Sentinel RMS software, you must first uninstall the older version, as described in step 2.a.

1. Log on to the license server with administrator privileges.
2. If any version of the OSG Floating License Manager or the Sentinel RMS License Manager software is installed on the license server computer, you must uninstall it using the following sub-steps. If no prior version is installed, skip to step 3.
   a. Open the Control Panel and select Programs and Features.
   b. If the list includes both the OSG Floating License Manager Admin Tools and the Sentinel RMS License Manager, shown in the following figure, you must uninstall both of these.
   c. Select the program to uninstall and then click Uninstall/Change.
   d. Follow the instructions on screen.
3. Navigate to the folder where the setup file is located.
4. Double-click the setup file FloatingLM.exe.

The Welcome screen for the OSG Floating Manager Admin Tools wizard is displayed.
5. Click Next.

   The License Agreement screen for the OSG Floating License Manager Admin Tools is displayed.

![License Agreement Screen]

6. Click the I Accept option and click Next to continue.

   The Ready to Install screen is displayed.

![Ready to Install Screen]

7. Click Install.

   The progress screen is displayed while the software is installed.
8. Accept the default values for all questions.
   The Welcome screen for the Sentinel RMS License Manager is displayed.

9. Click Next.
   The License Agreement screen for the Sentinel RMS License Manager wizard is displayed.
10. Click the I Accept option and then click Next to continue.
   The Customer Information dialog box is displayed.

11. Click Next to accept the defaults and continue.
   The Destination Folder screen is displayed.

12. Click Next to accept the default and continue.
   The Setup Type screen is displayed.
CHAPTER 3 Installing LucidShape with a Floating License

13. Click Next to accept Complete (recommended) and continue.

   The System Firewall Settings screen is displayed.

14. Leave the option turned on (checked) and click Next.

   This setting allows the Floating License Manager to add inbound rules. If you change this setting, LucidShape will not be able to obtain the license needed to run.

   The Ready to Install screen is displayed.
CHAPTER 3 Installing LucidShape with a Floating License

15. Click Install.

The progress screen is displayed while the software is installed.

When the installation is finished, the Completed screen for the Sentinel License Manager is displayed.

16. Click Finish.

The wizard finishes installing the OSG Floating License Manager Admin Tools, and then the Completed screen is displayed.
17. Click Finish.

The installation is complete.

18. Reboot your computer if prompted to do so.

If you already have a license key for this product, skip to Installing a License Key for a Floating License on page 20. If you do not yet have a license key, continue with Obtaining the Host ID for a License Dongle on page 19.
Obtaining the Host ID for a License Dongle

A license key is designed to work for only one USB dongle, so the license key is associated with a unique value encoded on the dongle called a Host ID. Because of this, you need to know the Host ID for the license dongle before you can request a license key. The Host ID is printed on a label on the USB dongle; if you’re unable to read the ID on the label, you can also obtain the Host ID by running a program that reads it from the dongle. The GetHostID utility is provided with the OSG Floating License Manager for this purpose. Follow these steps to run GetHostID.

1. Insert the USB dongle in an active USB port on the license server. A light glows at the end of the dongle when it’s inserted correctly inserted in an active USB port.
2. Select the Windows Start menu, expand the OSG Floating License Manager group, and select GetHostID, shown in the following figure.

The GetHostID utility is displayed.

In this example, the Host ID for the USB dongle is 400-*MMMMMMMMMMMMMMM.
3. Copy the Dongle Host ID to retrieve your license key on the Synopsys SolvNetPlus website. See Retrieving License Keys on page 40 for instructions.
4. Click Done to close the GetHostID utility.

After you retrieve your license key, go to Installing a License Key for a Floating License on page 20.
Installing a License Key for a Floating License

After you install the license server software and retrieve a license key, you need to install the license key on the license server before client machines can successfully run LucidShape. The Floating License Installer is provided for this purpose.

This procedure assumes that you have already obtained a valid license file from the SolvNetPlus SmartKeys web page. If you have not done so, see Retrieving License Keys on page 40 for instructions.

Follow these steps to install your license key.

1. Make sure that the license dongle is inserted in an active USB port on the license server. A light glows at the end of the dongle when it's inserted correctly in an active USB port.

2. Click the Windows Start button on the taskbar, and select OSG Floating License Manager > Floating License Installer.

The Floating License Installer is displayed, as shown in the following figure.

3. Click the Browse button.

4. In the Open dialog box, navigate to the license key file, select it, and click Open.

The Open dialog box is closed, and the path to the license key file is shown in the Floating License Installer.

Note: For any one product, it is not possible to have two sets of license keys (locked to different dongles) on the same floating license server. Each set of license keys is composed of a set of exclusive module licenses; because of this, if you install license keys for a product and then add a second set of license keys for that product, the second set of license keys will override the first set.
5. Click the Install button.

The license key is installed, and the Success dialog box is displayed.

6. To close the Floating License Installer, click the X in the top right corner.

Continue with Installing LucidShape on Client Machines on page 21.

**Installing LucidShape on Client Machines**

LucidShape must be installed on each client machine where it will be used.

These instructions assume that you have already downloaded the LucidShape product from the SolvNetPlus website or that you ordered and received a DVD for the product. If you have not done so, see Using SolvNetPlus to Obtain LucidShape Software and Licenses on page 33 for instructions.

1. Log on to your computer as Administrator.

2. Navigate to the folder where the LucidShape setup file is located. If you have a DVD, insert it into the DVD drive and navigate to that drive.

3. Double-click the setup file (e.g., SetupLucidShape_version.exe)

   where `version` is the version number for the release (e.g., SetupLucidShape_2019.09.exe). For the LucidShape CAA V5 Based product, the file name also includes the CATIA version (e.g., SetupLucidShapeCAA_R25_2019.06-1.exe).

The Setup window is displayed at the License Agreement screen.
4. Click I Agree to continue.

If you are installing LucidDrive or LucidShape CAA, the Choose Install Location screen is displayed. Skip to step 6.

If you are installing LucidShape or LucidShape Lite, the Choose Components screen is displayed. By default, the LucidShape option is selected.

5. Choose the product(s) you want to install and click Next.

The Choose Install Location screen is displayed.

6. Specify a location.

If an earlier release of the product was installed, the default location will be set to the path used for that release. If you want to install the program in a different folder, click the Browse button to locate and specify that folder.

For most LucidShape products, the default location is `C:\productId\version`.

For LucidShape CAA, the default location is `C:\Program Files\Synopsys\LucidShapeCAA\CATIAversion\LucidShapeCAA\version`.
7. Click Next (for LucidShape CAA V5 Based) or click Install (for all other LucidShape products).

If you are installing a LucidShape product other than LucidShape CAA V5 Based, the Setup window shows the progress of the installation. Skip to step 12 on page 24 to finish the installation process.

If you are installing the LucidShape CAA V5 Based product, the Choose CATIA Installation Directory screen is displayed; continue with the following steps.

The Choose CATIA Installation Directory screen allows you to associate the LucidShape CAA product with a specific CATIA installation. If a CATIA installation folder was detected, the path to that folder is displayed in the input field. If CATIA is not installed on the same computer, or if CATIA is managed by a third-party tool that maintains configurations and versions, the input field may be blank, and you may need to perform additional steps to complete your installation. See Troubleshooting the LucidShape CAA V5 Based Installation on page 45 for details.

8. If you need to specify or want to change the CATIA installation folder, edit the path or click the Browse button to navigate to it and select it.

9. Click Next to continue.

The Choose Public Data Location screen is displayed. This allows you to specify a location for installing public data, such as example model files. To allow interactive use of these files, choose a folder for which you have write permission. The default location is
CHAPTER 3 Installing LucidShape with a Floating License

C:\Users\Public\Documents\LucidShapeCAA\CATIAversion\LucidShapeCAAversion (e.g., C:\Users\Public\Documents\LucidShapeCAA\R25\2019.06-1).

10. To specify a different folder, edit the path or click the Browse button to navigate to it and select it.

11. Click Install.

The Setup window shows the progress of the installation.

When the process is complete, Installation Complete is displayed in the Setup window.

12. For LucidShape CAA, this is the final screen in the installation wizard. Click Close and skip to step 14. For all other LucidShape products, click Next to exit the LucidShape installation wizard.

The Completing the LucidShape Setup Wizard screen is displayed.
13. Click Finish.

**Note:** LucidShape software will not be able to run if it is blocked by Data Loss Prevention software (e.g., DeviceLock) or anti-malware software (e.g., Trend Micro) installed on your computer. Contact your system administrator to ensure that such software has a policy that allows LucidShape software to be whitelisted.

14. To enable the floating license for this product, see *Enabling the Floating License* on page 26.

15. If you are installing LucidShape CAA, you must perform one more step before you can use this product. See *Specifying Global Settings for NVIDIA Graphics Card* on page 47 for instructions.

16. If you are installing LucidShape CAA with a license for the Light Guide Design Module, you must perform one more step after you install your license key but before you can use this module. See *Set CATIA Option to Preserve Object Naming for the Light Guide Design Module* on page 48 for instructions.
Enabling the Floating License

To enable the floating license to work for your LucidShape installation, you need to specify the name of your license server in a LucidShape initialization file, as described in these steps.

1. Start LucidShape. The License Check Failed dialog box is displayed.

2. Click the Floating option.

3. Optional Module Selection options (available for LucidShape CAA only):
   - If you have a license for the Design Module and/or the Visualize Module, you can specify the whether you want to activate licenses for those modules when you start LucidShape CAA.
   - If you would like to specify which module license you want to use when you start LucidShape CAA, click the check box to show floating license setup on startup.
When this option is checked, the following dialog is displayed when you start LucidShape CAA so that you can activate or deactivate licenses for the Design or Visualize modules.

4. Delete the text no-net, enter the name of your license server, and click OK.

The server name is copied to the LucidLicensing.ini file.

5. Restart LucidShape as prompted.

**Administering Floating Licenses**

In general, there is nothing that you need to do to administer the floating licenses. As long as the floating license server machine is operational, connected to the network, and is running the Sentinel service, licenses are available to clients.

**Monitoring License Use**

It is possible for all available licenses to be in use, which would prevent additional clients from running LucidShape. In such cases, a system administrator can use the Sentinel Administrator Utility (WlmAdmin) to determine to whom the module licenses have been allocated.

**Note:** To use the Administrator Utility utility, you must be the person who started the license server, or you must have administrator privileges.

1. To start the utility, click the Windows **Start** menu and select **Programs > OSG Floating License Manager > Administrator Utility**.
2. Expand the list of modules below the license server hostname.

The details presented in the dialog box indicate which client machine and username have checked out the licenses. The example below shows that from the license server machine **INSPIRONAMD**,
a LucidShape license is checked out to a user named *J Doe*, who is using a client machine named *J Doe-z400_1*.

You can also use the Administrator Utility utility to obtain other licensing activity information, such as license servers detected, details on active licenses, etc. For more information about how to use the Administrator Utility utility, see the *Sentinel System Administrator’s Guide*. After the Sentinel software is installed, this manual is available by selecting the Windows *Start* menu and selecting *Programs > OSG Floating License Manager > System Administrator’s Guide*.

---

**Note:** Not all functions described in the *Sentinel System Administrator’s Guide* are supported by LucidShape.

---

**Improving Access to LucidShape Licenses with the Sentinel License Manager**

By default, LucidShape licenses are available to anyone on your server on a first-come, first-served basis. Therefore, you can use LucidShape immediately without using the OSG Floating License Manager. However, if you want to control access to these licenses based on work priorities, you can use the Sentinel Administrator Utility to reserve copies for or deny access to specific users.

Before using the Administrator Utility, consider how you want to organize your groups, keeping in mind the following points:

- Anyone on your server can use a license that has not been explicitly reserved.
- After you create a group, you can specify the status of individual members as *Included* (access allowed) or *Excluded* (access denied).
• You can exclude all members of a group from using licenses (called license tokens) by specifying
  0 licenses for that group.

For example:

• Organize by department:

  If you have departments in your organization, enter each department as a separate group, assign
  the appropriate number of license tokens to each group, and designate each group member as
  Included or Excluded. You can change this designation for members as needed, according to work
  priorities.

• Organize by priority:

  Create a group for preferred users and another group for everyone else. In the preferred user
  group, designate all members as Included and assign to them as many licenses as you can allow.
  For the second group, you enter everyone else in the company, assign the remaining license
  tokens, and designate which people are Included and which are Excluded. You can change the
  Included and Excluded designations as the work load changes.

When you are ready to implement this arrangement, you can use the Administration Utility provided
with the OSG License Manager to create a reservation file, as described in the following steps.

1. On the license manager server, start the license manager Administration Utility from the Windows
   Start button:

   **Start > All Programs > OSG Floating License Manager > Administrator Utility**

   The WlmAdmin dialog box is displayed.

2. From the menu at the top of the WlmAdmin window, select **Edit > Reservation File**.

   The Wlsgrmgr dialog box is displayed.

3. To set up a new members group, select **File > New**.

4. Follow these steps to select a feature.

   a. Select **Feature > Add**.

      The Add License Reservation Wizard is displayed.

   b. Click **Next** to continue.

      The Feature Version Capacity dialog box is displayed.

   c. Enter the appropriate Feature Name.
You must enter feature names as they appear in the WlmAdmin dialog box, shown in the following example.

d. For the Feature Version, enter ORA (upper case).

e. Click Next.
   The Group dialog box is displayed.

5. To establish a user group, follow these steps.
   a. Enter a name that identifies the user group for which you want to allow or deny access.
b. In the Tokens field, enter the number of licenses to reserve for that group.

c. Click Next.

The Members dialog box is displayed.

6. To add members to the group, follow these steps.

**Note:** You can add members who will be allowed access, as well as members who will be denied access.

a. Click the Add button.

The Member dialog box is displayed.

b. Keep the User option selected, shown in the following figure, and enter the member’s name in the Name of the Member field. You can define members only by user name and not by Machine.
CHAPTER 3 Installing LucidShape with a Floating License

c. Click Included for members who are allowed access or Excluded for members who are denied access.

d. Click OK on the Member window and repeat the process to add each user in the group.

e. Click Finish on the Members window to apply the changes and close the window.

7. Repeat the process of selecting a feature, establishing a group, and adding members for each group (steps 4, 5, and 6, above).

8. Select **File > Save As** and navigate the directory where the license manager is installed.

   By default, the license manager is installed in C:\Program Files (x86)\Common Files\SafeNet Sentinel\Sentinel RMS License Manager\WinNT.

   The file `lsreserv` is created and saved at this location. The license manager references this file to determine which users have access to each feature.

9. Restart the Sentinel RMS License Manager, as described in the following steps.

   a. Click the Windows Start button and select Control Panel.

   b. Click Administrative Tools.

   c. Double-click Services.

   d. In the Services dialog box, locate and right-click the Sentinel RMS License Manager and select the Restart option on the pop-up menu.
Appendix A Using SolvNetPlus to Obtain LucidShape Software and Licenses

Software and license keys for the LucidShape family of products are available for download from the Synopsys SolvNetPlus website. This appendix describes how to use the website to download these software products and the license keys required to use them.

Note: For customers working with distributors, please contact your local LucidShape software distributor to obtain your software and license. See the Synopsys Optical Solutions Group Global Contacts page for contact information.

Although the examples in this document show and refer to the LucidShape product, the instructions apply to the entire LucidShape family of products, which includes:

• LucidShape
• LucidShape Lite
• LucidDrive
• LucidShape CAA V5 Based

Special terms used in these instructions are explained in the Glossary on page 51.

The process is described in the following procedures.

1. Signing Up for a SolvNetPlus Account on page 34
2. Downloading LucidShape Software from SolvNetPlus on page 35
   or
   Ordering Media (CDs/DVDs) on page 37
3. Installing LucidShape on page 40
4. Retrieving License Keys on page 40
APPENDIX A Using SolvNetPlus to Obtain LucidShape Software and Licenses

Signing Up for a SolvNetPlus Account

Before you can download LucidShape software and license keys, you must sign up for a Synopsys SolvNetPlus account. If you already have a SolvNetPlus account, you can skip to Downloading LucidShape Software from SolvNetPlus on page 35.

1. Go to https://solvnetplus.synopsys.com and click REGISTER - CREATE ACCOUNT.

2. Follow the instructions for SolvNetPlus Self Registration.
   SolvNetPlus will send a verification code to the email address you specified. You must retrieve the code and enter it on the SolvNetPlus site to complete your registration.

   During the registration process, you also need to enter your company’s Site ID. If you do not know your company’s Site ID, please contact solvnetplusfeedback@synopsys.com to request it. Be sure to include your company name and address in the email request.
Downloading LucidShape Software from SolvNetPlus

Follow these steps to download any of the software products in the LucidShape family of products. If you unable to download software, you can order a CD or DVD instead. See Ordering Media (CDs/DVDs) on page 37 for instructions.

1. Go to https://solvnetplus.synopsys.com and enter your User Name and Password to sign in.
2. Click Downloads.

All Synopsys products currently licensed at your company will be listed.

3. Select the product you want to download.

4. Select the version you would like to download.
APPENDIX A Using SolvNetPlus to Obtain LucidShape Software and Licenses

The Download Details page is displayed, shown in the following figure.

5. Under Release Alerts, click the Sign up link to display Release Alerts options that allow you to subscribe to Release Notification emails from SolvNetPlus. These emails let you know when a new version of LucidShape is available for download.
a. Click the product name for which you would like to receive notifications or click ALL to receive notifications for all products in the list.

b. Click the Add button.

c. Click the Include patch notifications check box. This allows you to receive notifications of LucidShape service releases.

d. Click the Update button.

You are returned to the Download Details page.

6. On the Download Details page, click Download Here.

7. On the Notice page, click Agree and Sign In to continue.

8. From the list of available files, click the name of the file and then use your browser to open or save the file.

   The following figure shows a list of files for LucidShape version 2019.09.

   ![](figure.png)

   - checksum_info.txt is a file used for internal purposes.
   - FloatingLM.exe is for floating license customers. Only the system administrator who will set up a floating license server needs to download this file. See Installing LucidShape with a Floating License on page 11 for installation instructions.
   - README_LucidShape_2019.09.txt provides a summary of key features in the release.
   - SetupLucidShape_2019.09.exe is the installation file for LucidShape.

   Ordering Media (CDs/DVDs)

   If you unable to download software and would like to order media (CD or DVD) instead, you can do this directly on the Synopsys SolvNetPlus website. Follow these steps to order media.

   1. Go to [https://solvnetplus.synopsys.com](https://solvnetplus.synopsys.com) and enter your User Name and Password to sign in.
   2. Click Downloads.
   3. Click the MediaCenter link.
4. On the Media Center page, select the product (e.g., LucidShape, LucidDrive, etc.) and click the Add button.

5. Complete the Shipping Address information and click Continue.

6. Review the shipping request, shown in the following figure, and click Place Order.

Installing LucidShape

Instructions for installing LucidShape products and license keys are provided in the following chapters:

- *Getting Started* on page 1 - lists LucidShape system requirements and tells you how to contact LucidShape Support.
- *Installing LucidShape with a Fixed License* on page 3 - With a fixed license, you install the product, the license dongle, and the license key on the computer where you want to run LucidShape.
- *Installing LucidShape with a Floating License* on page 11 - With a floating license, you install the license dongle and license key on a network server and the product on one or more client machines where you want run LucidShape; you also install the OSG Floating License Manager on the network server to manage the licenses.

After you install the LucidShape product, continue with *Obtaining the Host ID for a License Dongle* on page 40.

Obtaining the Host ID for a License Dongle

A license key is designed to work for only one USB dongle, so the license key is associated with a unique value encoded on the dongle called a Host ID. Because of this, you need to know the Host ID for the license dongle before you can retrieve a license key. The Host ID is printed on a label on the USB dongle; if you’re unable to read the ID on the label, you can also obtain the Host ID by running a program that reads it from the dongle; the GetHostID utility is provided for this purpose. See the following steps to run the GetHostID utility.

- If you’re installing a fixed license: *Obtaining the Host ID for a License Dongle* on page 7
- If you’re installing a floating license: *Obtaining the Host ID for a License Dongle* on page 19

After you obtain the Host ID, continue with *Retrieving License Keys* on page 40.

Retrieving License Keys

A license key is a file containing licensing information for your specific USB dongle. You can obtain license keys using the SmartKeys web page on the Synopsys SolvNetPlus website. Follow these steps to obtain your license keys.

1. On the SolvNetPlus home page, click Downloads and then click the SmartKeys tab.

2. On the SolvNetPlus SmartKeys Home page, click the Key Retrieval link.
The SmartKeys Key Retrieval page is displayed.

You can retrieve a license key for a single USB dongle, or you can retrieve license keys for all Host IDs at your company.

3. To obtain a license key for a single USB dongle, enter the Host ID of your LucidShape USB dongle in the Host ID (Optional) field. If you do not know the Host ID value for your USB dongle, see Obtaining the Host ID for a License Dongle on page 40.

   To obtain license keys for all products and all Host IDs at your company, leave the Host ID (Optional) field blank and go on to step 4.

4. Click Retrieve Key, shown in the following figure.

Your LucidShape license key will be delivered as a text file attached to an email from the SmartKeys system. If you did not enter a Host ID in step 3, you will receive a separate email with
a single license key attached for each Host ID at your company. The email will include the Host ID for which the license key is valid.

5. Save the license key to a convenient location on your computer. You need to access this file to activate LucidShape.

6. See one of the following procedures for instructions on installing the license key to activate your LucidShape product.

   – *Installing a License Key for a Fixed License* on page 8
   – *Installing a License Key for a Floating License* on page 20
Appendix B  Troubleshooting the Floating License Installation

If a security problem occurs when you use a LucidShape floating license, a dialog box displays an error message. Below are a few common security errors with their causes and resolutions. If you are unable to correct the problem, contact a LucidShape representative at lucidshapeinfo@synopsys.com.

Problems Installing the License Key Using the Floating License Installer

**Problem:** Invalid locking code. Check dongle.

**Cause:** This could indicate that the license dongle has not been inserted in the USB port, the USB port is not active, or that the dongle is not valid.

**Solution:** Restart the Sentinel RMS License Manager service. To do this, select Start > Control Panel, click Administrative Tools and then double-click Services. Locate and right-click Sentinel in the dialog box, and select the Restart option on the pop-up menu. Then, insert a valid license dongle in an active USB port (a light glows at the end of the dongle when it’s inserted correctly in an active USB port) and repeat the steps for installing the license key. (See **Installing a License Key for a Floating License** on page 20 for instructions).

**Problem:** Sentinel: Error [19]: Failed to add license code …

**Cause:** This general error message indicates that the license key was not applied successfully in the license manager. This can occur if the file containing the license keys has been corrupted or if license keys that have already been successfully entered are entered a second time.

**Solution:** Verify that the license key file contains license keys for the version of LucidShape being installed, and not for an earlier version; the version number is listed in the comments of the license key file. Also, verify that the license key file has not become corrupted, which could occur if the license key file has been edited (i.e., lines containing license keys are changed or become line wrapped incorrectly).

Problems Starting LucidShape

**Problem:** Error #18b - No valid license code for version x.x.x found.

**Cause:** Valid license keys have not been entered for this version of LucidShape.

**Solution:** See **Installing a License Key for a Fixed License** on page 8 for instructions on installing license keys.
Problem: **Error #0xC800100D - License code for LucidShape version x.x.x has expired.**

Cause: The license keys for LucidShape have expired, or the PC date is before the start date of the license.

Solution: Verify that the date on the computer is correct. Install the license keys for this version of LucidShape on the license sever machine according to the instructions in *Installing a License Key for a Floating License* on page 20. If new license keys are needed, contact your local distributor or a LucidShape representative at lucidshapeinfo@synopsys.com.

Problem: **Error #8001008 - License manager is not responding. Verify license manager host is available and license manager process is running.**

Cause: The Floating License Manager program has been disabled.

Solution: Restart the license manager program. To do this, select Start > Control Panel, click Administrative Tools and then double-click Services. Locate and right-click Sentinel in the dialog box, and select the Restart option on the pop-up menu.

Cause: The license manager machine is unavailable.

Solution: Verify that the license manager machine is available on the network.

Cause: The name of the license server machine has not been correctly specified.

Solution: In order for LucidShape to use a floating license, you must specify the name of the license server machine in an initialization file on the client machine (i.e., the machine on which LucidShape is installed). For instructions on specifying the license server machine to enable your floating license, see *Enabling the Floating License* on page 26.
Appendix C  Troubleshooting the LucidShape CAA V5 Based Installation

See the following topics for troubleshooting information if you have a problem with LucidShape CAA or the Light Guide Design Module.

- Problems Associating LucidShape CAA with the Appropriate CATIA Installation on page 45
- Specifying Global Settings for NVIDIA Graphics Card on page 47
- Troubleshooting the Light Guide Design Module on page 48

Problems Associating LucidShape CAA with the Appropriate CATIA Installation

You may run into configuration issues when you install LucidShape CAA V5 Based installations if CATIA is not installed on the same computer or if CATIA is managed by a third-party tool that maintains configurations and versions. The following steps are recommended if you encounter problems associating your LucidShape CAA installation with the appropriate CATIA installation.

- Choose the CATIA Installation Directory in the Setup Wizard on page 45
- Manually Create a New CATIA Environment on page 46

Choose the CATIA Installation Directory in the Setup Wizard

During the installation process, you are prompted to choose the installation folder with which to associate the LucidShape CAA product. If a CATIA installation folder was detected, the path to that folder is displayed in the input field; however, if CATIA is not installed on the same computer, or if CATIA is managed by a third-party tool that maintains configurations and versions, the input field may be blank.

![Screenshot of the Setup Wizard](image)

Edit the path or click the Browse button to navigate to the appropriate directory and select it; then, complete the installation instructions. If LucidShape CAA is not correctly associated with CATIA, see Manually Create a New CATIA Environment on page 46.
Manually Create a New CATIA Environment

If LucidShape CAA is not correctly associated with the CATIA after using the LucidShape Setup wizard, you may need to contact the CATIA administrator in your IT department to manually add LucidShape CAA to a different environment, as described in the following steps.

1. To open the CATIA Environment Editor, click the Windows Start menu and select CATIA > Tools > Environment Editor

2. In the Environment Editor, select Environment > New.

3. In the New Environment dialog box, append the LucidShape CAA installation path to the Install Path and press OK.

If these steps do not resolve the issue, contact LucidShape CAA support at lucidshape_support@synopsys.com.
Specifying Global Settings for NVIDIA Graphics Card

If you are using an NVIDIA graphics card, it's essential to set the Global settings as described in the following steps. These settings are required by the CATIA V5 environment in order to run LucidShape CAA V5 Based software.

1. Right-click on your desktop and select NVIDIA Control Panel.

![Image of NVIDIA Control Panel]

2. Select 3D Settings > Manage 3D Settings on the left under Select a Task.

![Image of Manage 3D Settings]

3. On the Global Settings tab, set the Global presets to Dassault Systemes - V5 and set the Preferred graphics processor to High-performance NVIDIA processor, as shown in the following figure.

If you have only one graphics processor available, the Preferred graphics processor option is not displayed.

![Image of Global Settings]

4. Click Apply
APPENDIX C Troubleshooting the LucidShape CAA V5 Based Installation

Troubleshooting the Light Guide Design Module

See the following topics if you have a problem running the Light Guide Design Module.

- Verify That the Light Guide Design Module is Linked with LucidShape CAA on page 48
- Set CATIA Option to Preserve Object Naming for the Light Guide Design Module on page 48

Verify That the Light Guide Design Module is Linked with LucidShape CAA

In some situations, the LucidShape CAA V5 Based product appears to have installed successfully, but you may not able to use the Light Guide Design Module; for example, you may be able to start the Light Guide Design Module but not be able to create a spline curve to start the design process. This may indicate that the Light Guide Design Module is not linked properly with LucidShape CAA. To fix this, run the file SetupEnvironment.bat located in the LucidShape CAA installation folder (e.g., C:\Program Files\Synopsys\LucidShapeCAA\R25\2019.06).

If this does not fix the problem, you may not have adequate privileges to automatically perform all the steps needed to properly enable licensing. (Administrator privileges can vary, depending on the configuration for your Windows operating system.) To work around this problem, you can manually run one of the license tools as administrator, as described in the following steps.

2. In Windows Explorer, navigate to the LucidShape CAA V5 Based installation directory on your hard drive and open the sub-folder LicenseTools.
3. Right-click the file lsinit.exe and select Run as administrator on the shortcut menu.

If the problem is not resolved, contact LucidShape CAA support at lucidshape_support@synopsys.com.

Set CATIA Option to Preserve Object Naming for the Light Guide Design Module

Depending on the CATIA Options settings, CATIA may rename objects created by the Light Guide Design Module to avoid having duplicate names in the Specification Tree. When this happens, the Light Guide Design Module can no longer identify those objects or continue to perform operations. To circumvent this problem, set the CATIA renaming option as described in the following steps.

1. Select the CATIA menu Tools > Options.
2. Expand the Infrastructure heading in the Options tree on the left and select Part Infrastructure.
3. Select the Display tab.
4. Under the heading Checking Operation When Renaming, make sure that No name check is selected, as shown in the following figure.
5. Click OK.
6. Restart LucidShape CAA for the change to take effect.

**Note:** The Light Guide Designer automatically checks the No Name Check option and displays the following warning if it has not been activated.
