Modern organizations deploy a plethora of web applications, ranging from external-facing corporate websites, customer portals, shopping carts, and login pages to internal-facing HR portals. Web applications are an appealing target for hackers, because they can exploit vulnerabilities in these business-critical applications to gain access to back-end corporate databases.

WhiteHat Dynamic

WhiteHat Dynamic is a software-as-a-service (SaaS) dynamic application security testing (DAST) solution that allows your business to quickly deploy a scalable web security program. No matter how many websites you have or how often they change, WhiteHat Dynamic can scale to meet any demand. It provides security and development teams with fast, accurate, and continuous vulnerability assessments of applications in QA and production, applying the same techniques hackers use to find weaknesses, so you can remediate them before the bad guys exploit them.

WhiteHat Dynamic is a cloud-based solution that requires no hardware or scanning software to be installed. It provides

- Unlimited, continuous, and concurrent assessments
- Automatic detection and analysis of code changes in web applications
- Open API integration to security information and event management solutions, bug-tracking systems, and web application firewalls

WhiteHat DAST fits into any environment and is highly scalable, with the ability to assess thousands of websites simultaneously. Furthermore, all vulnerabilities are verified by Synopsys security experts, virtually eliminating all false positives.

Powered by artificial intelligence and machine learning

WhiteHat Dynamic brings together machine learning (ML), artificial intelligence (AI), and expert vulnerability analysis to deliver the most accurate dynamic application security testing results, so you can verify the security of your web applications without slowing down developers with false positives.

Years of valuable data gathered by our highly trained security experts is used to develop our proprietary AI/ML models. This approach provides fast, automated results augmented by expert validation, enabling earlier detection and faster response to cyberattacks.

How WhiteHat Dynamic works

WhiteHat Dynamic combines automated application scanning with the world’s largest security expert team to provide you with verified vulnerabilities and actionable reports.

Onboarding
Customer provides URLs, logins, and schedule

Initial scanning
Discovery, fine-tuning, and configuration

Website assessment
Unlimited assessments, vulnerability detection, and verification

Reporting
Results displayed in a portal with customizable reports
Choose the WhiteHat edition best suited to your needs

|---------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|-----------------------------------------------|
| • For mission-critical permanent websites with multistep forms and rigorous compliance requirements  
  • Includes all SE features and business logic testing                                     | • For permanent websites that are not necessarily mission-critical  
  • Includes all BE features and tests for issues involving multistep forms and logins     | • BE is the foundational solution for basic, less-critical websites  
  • Includes automated scanning and vulnerability verification, ideal for lower-risk websites |

What Makes WhiteHat Dynamic Unique

Easy to deploy, concurrent, and scalable
WhiteHat Dynamic is an easy-to-deploy cloud-based dynamic security testing solution that can onboard and test over 10,000 websites concurrently without slowing you down. It is scalable to fit any environment and matches your pace of development.

Continuous assessment methodology
WhiteHat Dynamic offers true continuous analysis, constantly scanning your website as it evolves. Automatic detection and analysis of code changes to web applications, alerts for newly discovered vulnerabilities, and the ability to retest a vulnerability without having to test from the beginning offer an "always on" risk assessment.

Production safe
WhiteHat Dynamic is completely safe for production websites with no performance degradations. Data integrity is assured by using benign injections in place of live code, and custom tuning of scans permits full coverage without performance impact.

Verified, actionable results with near zero false positives
Every vulnerability is validated by security experts and augmented by AI, virtually eliminating false positives. This enables you to streamline the remediation process, prioritize vulnerabilities based on severity and threat, and focus on remediation and your overall security posture.

Enterprise-class reporting in flexible formats
Understand the performance of your security programs and improve application security posture with powerful built-in reports. Advanced analytics capabilities monitor trends and key statistics such as remediation rates, time-to-fix, and age of the vulnerabilities. Trending analysis tracks real-time and historical data to measure your risk exposure over time and provide you with visibility into your most- and least-secure websites at a glance.

Unlimited access to web security experts
With WhiteHat Dynamic, you have unlimited access to expert web application security testers and custom remediation guidance. The "Ask a Question" feature enables you to access security experts at any time, right from the portal.

Open API integration
WhiteHat Dynamic can be integrated with popular bug-tracking systems; security information and event management solutions; governance, risk, and compliance products; and web application firewalls (WAFs).

Fully automated single page application scanning
WhiteHat Dynamic provides fully automated scanning and testing of single-page applications as well as traditional applications. It loads your web application into a browser and interacts with it the same way a user would. Production-safe assessments find vulnerabilities other traditional scanning tools miss.

PCI compliance
WhiteHat Dynamic exceeds the requirements of PCI DSS 3.1 by providing ongoing, verified vulnerability assessments for both internal and public websites. WhiteHat PE includes business logic assessments as required by PCI DSS. Integrations with WAFs support the creation of virtual patches to fix vulnerabilities while providing the reports needed for auditor inspections.

WhiteHat Security Index
The WhiteHat Security Index (WSI) gives you an instant, visual overview of the robustness of your website security, providing one score that indicates overall application security. Calculated from a comprehensive set of indicator data and based on our extensive experience with intelligence metrics and our broad base of customers in a variety of industries, this score truly reflects the state of application security across all your websites. With WSI insights, you can reduce risks, save time, prioritize activities, and improve overall security.
WhiteHat Dynamic | Detectable Vulnerabilities

Technical Vulnerabilities

Threat Classification
• Abuse of Functionality
• Application Code Execution
• Application Misconfiguration
• Autocomplete Attribute
• Brute Force
• Buffer Overflow
• Cacheable Sensitive Response
• Clickjacking
• Content Spoofing
• Cross Site Request Forgery
• Cross Site Scripting
• Denial of Service
• Directory Indexing
• Fingerprinting
• Frameable Resource
• HTTP Response Splitting
• Improper Input Handling
• Information Leakage
• Insecure Indexing
• Insufficient Anti-automation
• Insufficient Authorization
• Insufficient Password Policy Implementation
• Insufficient Password Recovery
• Insufficient Process Validation
• Insufficient Session Expiration
• Insufficient Transport Layer Protection
• LDAP Injection
• Mail Command Injection
• Missing Secure Headers
• Non-HttpOnly Session Cookie
• OS Command Injection
• OS Commanding
• Path Traversal
• Predictable Resource Location
• Query Language Injection
• Remote File Inclusion
• Routing Detour
• Server Misconfiguration
• Session Fixation
• Session Prediction
• SQL Injection
• SSI Injection
• Unpatched Software
• Unsecured Session Cookie
• URL Redirector Abuse
• XML External Entities
• XML Injection
• XPath Injection
• XQuery Injection

OWASP Top 10
• A1 - Broken Access Control
• A2 - Cryptographic Failures
• A3 - Injection
• A4 - Insecure Design
• A5 - Security Misconfiguration
• A6 - Vulnerable and Outdated Components
• A7 - Identification and Authentication Failures
• A8 - Software and Data Integrity Failures
• A9 - Security Logging and Monitoring Failures (out of scope)
• A10 - Server-Side Request Forgery (SSRF)

The Synopsys difference
Synopsys provides integrated solutions that transform the way you build and deliver software, accelerating innovation while addressing business risk. With Synopsys, your developers can secure code as fast as they write it. Your development and DevSecOps teams can automate testing within development pipelines without compromising velocity. And your security teams can proactively manage risk and focus remediation efforts on what matters most to your organization. Our unmatched expertise helps you plan and execute any security initiative. Only Synopsys offers everything you need to build trust in your software.
