

eLearning

On-demand access to security training for every member in your development organization

Our self-paced security training comprises an on-demand, role-based curriculum covering a wide array of technology stacks and frameworks. We partner with our team of 300+ software security practitioners to offer effective training based on their deep subject matter expertise and real-world experience.

Training for all your needs

Our software security eLearning curriculum features an extensive library of 29 courses and 3 microcourses (10–15 minutes long), spanning three instructional levels (introductory, intermediate, and advanced), so you can design a continuous learning plan to increase the security knowledge and skills of everyone involved in your software development life cycle.

Our courses cover the following:

- Software security fundamentals
- Language- and platform-specific information
- Mobile application security
- Requirements, architecture, and testing
- Security enablement services

Modular, flexible, and effective

We give you the flexibility to take classes when and where you want, so you can fit training into your team members' demanding schedules, wherever they're located. All courses are modular and bite-size, designed to actively engage your developers in the learning experience. You can design your own curriculum by subscribing to individual courses or to the whole library.

As a subscriber, you'll receive unlimited on-demand access to new and regularly refreshed material in all the courses you subscribe to. You also have the option to access our application security training material through your own learning management system or through our fully hosted learning platform.

See our [catalog](#) for a complete listing of courses

Best-in-class training

Unlike other application security training solutions, our courses aren't simply recorded classroom exercises or narrated slide decks. Our security training is crafted carefully by a balanced team of security experts, instructional designers, and storytellers, resulting in courses that are practical, informative, and instantly gratifying. Our courses feature the following:

- Top instructional design
- Animated demonstrations
- Hands-on exercises
- Technical deep dives
- Illustrated explanations
- Frequent knowledge checks and assessments

Course highlights

Not only does our training curriculum give you breadth and depth of knowledge, but we also offer the tools and features you need to ensure that your team—and every person on it—receives the most value and stays on track with their security learning goals.

- 24/7 unlimited on-demand access
- Specific technology stack and framework targets
- Modular and bite-size training
- Individual and group reporting
- Continuous content updates from the best security experts in the industry
- Compliance with SCORM 1.2 standard
- On-premises or hosted course deployment

Achieving security compliance by
addressing security competence

The Synopsys difference

Synopsys offers the most comprehensive solution for building integrity—security and quality—into your SDLC and supply chain. We've united leading testing technologies, automated analysis, and experts to create a robust portfolio of products and services. This portfolio enables companies to develop customized programs for detecting and remediating defects and vulnerabilities early in the development process, minimizing risk and maximizing productivity. Synopsys, a recognized leader in application security testing, is uniquely positioned to adapt and apply best practices to new technologies and trends such as IoT, DevOps, CI/CD, and the Cloud. We don't stop when the test is over. We offer onboarding and deployment assistance, targeted remediation guidance, and a variety of training solutions that empower you to optimize your investment. Whether you're just starting your journey or well on your way, our platform will help ensure the integrity of the applications that power your business.
