I-Foundation 2013.09 Solaris x86 Support End-of-Life

Dear Synopsys Customer:

*NOTE: The information in this letter affects **only those customers using the Solaris x86** Operating System (OS). If this does not apply to you, please disregard.*

We believe our customers need stable, well-supported operating systems on which to run their EDA tools. In order for us to align to timelines of our OS and hardware vendors, we are updating our compute platforms roadmap.

This letter is to inform you that Synopsys is dropping support for Solaris x86 platform starting with the 2013.09 (I-Foundation) software release. H-Foundation (2012.12, 2013.03, 2013.06) will be the final feature release to support the Solaris x86 platform. Service packs to releases prior to 2013.09 will continue to support the foundation of the corresponding feature release. These service packs will continue to support the Solaris x86 platform until June 2014.

More about Synopsys Compute Platforms:
Information on supported hardware platforms, operating systems, OS versions, and patch bundles for Synopsys products is available at the Synopsys web site at:
